## SCOUT LEADER EXPLAINS WORK TO AD CLUB MEN

"Cultivation of human nature is more important than the cultivation of the soil," said Roger Noble Burnham in a talk before the members of the Ad Club at the Alexander Young Hotel yesterday. Burnham, who is the new Hawaii commissioner of the Boy Scouts, gave an outline of the work which has been carried on to make the boy a better man.

In his opening words Burnham said: "I have been told that these were the Islands of the Blessed. I would change this to the Islands of the Gods. Vulcan is seen here in the work of your factories. Neptune is represented in the surf riders at Waikiki. Ceres is seen in the fields and Mars at present is much in evidence, although it is not directly felt in these islands. Bacchus is the only god who appears to be detested, as may be seen."

"The Boy Scout movement has for its purpose the development of the boy physically, mentally and morally. We have been told that the education of the boy has been the most efficient. In the moral work the boy is urged to practice what he preaches. A kind set, duty to his city and to his flag, and comradeship all go towards making a better boy."

"There is a need for scoutmasters in Hawaii, and this work is more than worth while. We may need money in carrying on the work, and may call upon the Ad Club in the future," he concluded.

Previous to the talk by Burnham, a number of the Boy Scouts carried the flag into the club room, while all members stood at attention, saluting the flag. President Wallace R. Farrington introduced the boys to the members of the club.

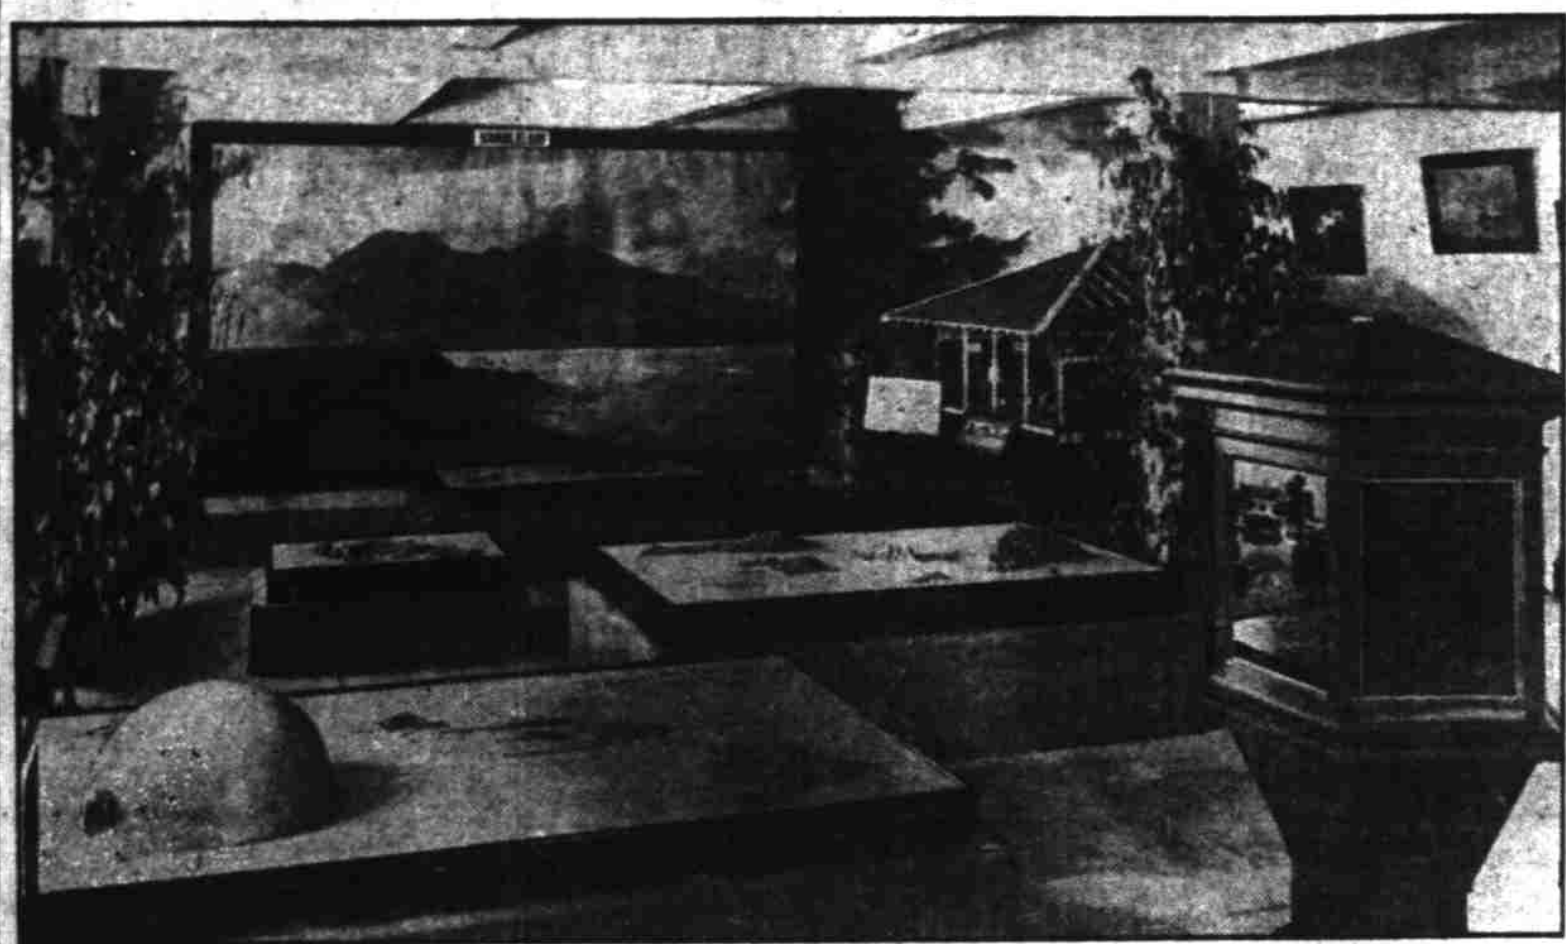

R. E. Macfie, a former resident of Hawaii and a contemporary of Robert Louis Stevenson, said that Hawaii was too cold for him. Coming from Porto Rico, where he has made his home for 25 years, he felt that the weather was too frigid, but this was more than made up for in the warmth and hospitality of the people. Macfie discussed the sugar situation in the island of the Caribbean, and remarked that in 1893 Porto Rico produced 40,000 tons of sugar. Last year he said Porto Rico produced more than 500,000 tons. He complimented the sugar men of Hawaii, saying that the Porto Ricans had learned much from the sugar factors of these islands.

President Farrington read a letter from John A. Tichenor of the Army and Navy Y. M. C. A., in which the secretary thanked the Ad Club for the manner in which the undertaking was carried out, giving Honolulu an Army and Navy Y. M. C. A. H. E. Vernon reported that the mayor and supervisors were working on a definite program which would receive the hearty endorsement of the people of the city, if all will get together and boost. Albin Clark reported on the condition of roads, stating that the estimates on Beretania street would without doubt be higher than at first figured on. Johnny Noble made a big hit with the members of the club. His xylophone solos were well received. A. H. Larimer played the accompaniment.

"My wife's always trying to do something to make the neighbors jealous." "So's mine," replied Mr. Cronkosta. "She has turned the back lot into a garden, and this summer we're going to raise our own vegetables."—Washington Star.

## Hawaii's Exhibit Has Important Place In California State Building at Los Angeles

Scenes in Hawaiian division of California state exhibit building at Los Angeles. Hawaii is the only "outsider" in this building. The Californians recognize the close bond between their state and Hawaii and in boosting one are glad to boost the other.

A most important link in a chain which will tend to bind more firmly the Territory of Hawaii to the Pacific coast of the mainland, has been forged with the installation of a splendid and very complete exhibit at the California state exposition building, located at Los Angeles.

Hawaii, may count itself as extremely fortunate in that through the efforts of the Hawaii Promotion committee, a large area of floor space for exhibition purposes was allotted this territory in a building, originally set aside solely to the interests of the several counties of the "Golden State."

Hawaii's best assets form the standpoint of inducing tourist travel from the mainland to the islands, are attractively displayed and featured through its big, handsomely decorated surf-board, bungalow type of school buildings, a collection of relief maps of all the principal islands, kiosks filled with picturesque transparencies, a wonderful diorama depicting scenic wonders on the island of Kauai, and a number of fine paintings which set forth diversified island attractions.

Hawaii's exhibit is installed at a commanding position, first to greet the thousands of visitors to the ex-

position building as they enter it on the main floor. It is forceful and compelling. Since formally opened to the public only a few weeks ago, it has awakened unusual interest, which has been amply attested by a large number of inquiries by visitors at a well-equipped information bureau, maintained in the main lobby of the exposition building.

The accompanying picture shows in a small measure the extent of the display by Hawaii, now a regular feature in a sight-seeing itinerary for visitors to the California state exposition building at Los Angeles.

## PIGEON PEA PLANTS TO BE GIVEN AWAY

A thousand pigeon pea plants, which grow excellent provender for poultry, will be distributed free to all inquirers at the Territorial Marketing Division, beginning Friday morning. Announcement to this effect was made today by John M. Watt, Oahu agent for the food commission, who had obtained them through courtesy of the H. S. P. A. experiment station. Supl. A. T. Longley, of the marketing division, has agreed to handle the distribution.

Pigeon peas when ground make one of the best and cheapest poultry foods. The plants require little or no care beyond setting in the ground; will grow on very dry, waste land, and the bushes make excellent permanent hedges and windbreaks. The peas grow quickly, the first crop ordinarily being ready for use in less than a year.

The plants to be given away are about a foot high, each in a paper pot ready to set in the ground. Because the number is comparatively limited, they will be distributed in lots of not more than 50, and individuals are asked to take no more than they know they can use. For planting in hedges, rows, they should be set closely; in vacant lots plants should be three or four feet apart, thus permitting bushes to grow to large size and give greatest results. Additional information concerning planting of pigeon peas may be obtained from the Oahu agent at the food commission headquarters, Fort and Merchant streets, phone 3191.

## BEAUTY CHATS

By EDNA KENT FORBES

For Neurotic Women

Neurotic women—women who are physically run down and extremely nervous—should never go hungry. Three meals a day is not sufficient, they should eat five or six times at least. The food keeps the stomach active and brings blood into it and away from the brain and head.

Which doesn't mean that nervous folks should overeat. Usually this type eats very little anyway, yet suffers more severely from hunger if the body is without food for more than six hours, than the healthy, normal type. The nervous woman, if possible, should sleep late, and eat something before arising. While doctors claim that coffee is not really advisable in the diet of neurotic people, I have always maintained that the slight stimulation of a hot cup in the morning is decidedly beneficial. Once the woman is up and using her energy, the stimulation, buoy her until her activities have roused her natural blood and energy.

A late breakfast, then luncheon, should follow. The longest fast of the day, between luncheon and dinner, should be broken by tea, a pleasant English custom that more American women should adopt. Dinner—and before retiring, a cup of hot chocolate or milk, and a few wafers. Coffee is only allowable in the morning; the night cup should be hot, and soothing, to bring the blood from the brain and to induce dreamless sleep.

Dear Miss Forbes—Please let me know how to make lime water, and what is the proportion of 1/30th part? Mrs. Charles Baerle.

Simple take a piece of pure lime—lime oxide is the technical term—and put it in pure water, letting it stay until all that will dissolve has become mixed with water. Make what chemists call a saturated solution—if all the lime dissolves, put more in until a part at least will not dissolve. This shows that the water has taken up all the lime it can hold. Then pour off into another bottle.

Nervous women should never go hungry.

Moth patches come from a sluggish liver or bladder in some cases; in others, from pure nervousness. Better get a good tonic from your doctor; one that will enrich and purify the blood. There is nothing you can do to shorten your lip.

## PLANTATIONS AID FOOD CAMPAIGN PLANTING CROPS

"Much progress is being made on the plantations in the effort to increase the food produce of the islands," says H. P. Agee, director of the Hawaiian Sugar Planters' experiment station on Keeaumoku street.

Over 40,000 packages of several varieties of bean seeds were distributed among the plantation laborers about the time of the governor's proclamation in which the people were urged to do what they could to make the islands self-sustaining in the present emergency. Information in all languages on the planting and raising of the beans was given and the beans were planted where there was spare ground to be had.

"On all of the plantations there are signs that some of the laborers, anyway, have responded to our efforts," said Mr. Agee. "The gardens are coming up and the small crops were harvested in a short time."

"Reports on questionnaires relating to what can be done by the plantations in this line, have been coming in slowly. They will give us a definite basis on which to work in the future."

That the Formosan leafhopper parasite that was introduced into the islands in 1916 is working most successfully against the pest against which it is supposed to guard the cane, is a report that has reached

## "Beauty Chats" Editor Gets 200 Letters a Day

Edna Kent Forbes, who conducts the "Beauty Chats" on this page every day, is one of the most popular young newspaper-women in the United States. She gets on an average of 200 letters a day from women and girls—yes, and some from men—asking questions on health, sanitary, recreational and similar matters. Each of these letters is given attention but the only questions answered through the service are those containing self-addressed and stamped envelopes.

## BEAN SEEDS 500 YEARS OLD AS GOOD AS EVER

GLOBE, Ariz.—Beans found in the cliff dwellings near here have been planted and some of them have been found to produce large plants which bore pods having from 10 to 12 large, pink beans which are grown in the southwest. Scientists in the southwest say the beans must have been placed in the cliff dwellings more than 500 years ago. The seed crop is to be used to produce beans for war crops.

the station. The parasite was put onto some cane on the land of the Oahu Sugar Company where it has attacked the leafhopper successfully.

## BEGIN TRANSFER OF FARM DAIRY TO QUARANTINE

Having made a study of proposed places to which the remainder of the herd of cattle in the anthrax infected dairy at Molokai may be removed, Dr. Victor A. Norgaard, territorial veterinarian, said yesterday that he will take them to the territorial quarantine station on Ala Moana road.

This work is to begin at once, Dr. Norgaard said, a preliminary precaution being taken to build the padlock fence at the station tight. Eighty-five cows, 30 young stock, two bulls and 12 horses will be taken in the herd. It is understood that the quarantine station is practically clear of animals.

According to word from Kaula no deaths have occurred there since June 19, with the single exception of one death at Niumalu, already reported. On the Hanalei ranch the animals show a ready response to the vaccination and in this herd cases of the slower form that have developed are evidently under control.

Dr. Norgaard made a trip to Castle Home, Manoa, yesterday to inspect a cow that had died suddenly, but investigation and microscopic study showed clearly that the case was not anthrax.

Bess—Nerve? Why, say! I've seen him joke with a waiter that he hadn't tipped.—Town Topics.

## Hawaii's Dominant Advertising Medium

The mere fact that the Honolulu Star-Bulletin has the largest average net paid circulation of any newspaper in the Hawaiian Islands is not the only reason for its dominance in its field.

Its circulation follows the movements of trade. It taps the points where active buyers congregate. Its expansion has been unparalleled and is growing by leaps and bounds as these figures show:

|                                                |      |
|------------------------------------------------|------|
| MAR 31-1916                                    | 4744 |
| Six months ending Sept. 30, 1915,              | 4724 |
| SEPT. 30-1916                                  | 5270 |
| Six months ending Mar. 31, 1916,               | 4744 |
| MAR 31-1917                                    | 6027 |
| Six months ending Sept. 30, 1916,              | 5270 |
| MAY 31-1917                                    | 5859 |
| Average Paid daily circulation April 30, 1915, | 4920 |
| OR A TOTAL GAIN IN NET PAID SUBSCRIPTIONS OF   | 931  |

A study of the above chart will reveal much larger increases than shown in the total gain given.

## Why not dominate your own field by advertising in the HONOLULU STAR-BULLETIN

## 25% reduction in Back East Excursion Fares

The Santa Fe will sell, for following dates, round trip tickets to—

**Chicago**

**Kansas City**

at 1/4 less than ordinary fares. Similar reductions to other eastern points.

Dates to start—from San Francisco

July 24, 25, 31.

August 1, 14, 15, 23, 29.

Others in September.

Return limit three months.

Stopovers permitted en route.

Call, phone or write

## WOMEN TO BE ASKED TO CONTRIBUTE JELLY FOR ALLIED SOLDIERS

Any woman who can make jelly will be given containers and can contribute to the shipment of jelly which the Ad Club is going to make to the soldiers at the front, according to W. R. Farrington, president of the Ad Club.

"While the exact arrangements have not been made as yet, except for the ordering of the 10,000 containers, women will probably be asked to contribute individually rather than to organize a kitchen," said Mr. Farrington yesterday.

A short time ago when the suggestion that jelly be made by the women of Honolulu for the soldiers, Mrs. H. H. Williams contributed 12 dozen jars. Since that time nothing definite along the jelly making line has been done.

## PRISON GATES OPEN FOR BOMB PLOTTER

LEAVENWORTH, Kan.—Herbert S. Hockin, who with thirty-eight others convicted by the federal court at Indianapolis of conspiracy to transport explosives illegally entered prison here Jan. 30, 1912, has left the penitentiary a free man. An hour after Hockin's release, Frank C. Webb, another of the thirty-eight was released.

## NEW MARCH BY SOUSA IS MASTERPIECE

CHICAGO, Ill.—Lieutenant J. Philip Sousa is to give the world a new masterpiece—the "Naval Reserve March."

The famous bandmaster confirmed this today before leaving for New York.

## SEED BIG TRACT LATE IN SEASON

NUNN, Colo.—Notwithstanding the lateness of the season a syndicate of Boulder men will put in 800 acres more crop in this vicinity as soon as the weather settles enough to permit planting. The ground is prepared and will be put into beans and wheat, though it is late for planting wheat.
